

Status

Current phase

Mark 100 (product bar) complete. **E1 operator path PASS**. Self-improvement / Loop Engineering / K1-lite knowledge orchestration shipped.

Latest update

- Closed [plan_to_mark_100.md](#) P0–P5: Postgres primary store, real tool adapters, PI disk artifacts, evolution corpus/fitness/canary/rollback, FE real forms + OpenAPI, ≥20 golden tasks, tiered retrieval.
- E1 API path verified ([reviews/e1_operator_checklist.md](#), [backend/app/tests/e2e/test_e1_operator_path.py](#)): login → create agent → flagship run → human gate → complete → reflect → propose → evaluate → canary.
- Fixed flagship agents' memory scopes so [memory_reads](#) no longer fail mid-run.
- Self-improvement: auto-reflect, lesson library, auto-propose, Loop DNA runner, optional LLM critic, skill sandbox.
- FE: Improve pipeline (Reflect → Propose → Evaluate → Canary), [/app/evolution](#) archive, Playwright smoke.
- Scorecard: [structure_scorecard_100.md](#) / [mark_100_verification.md](#) at **100/100** (product bar). FE lint fixed (0 errors).
- Branch/PR: [feat/mark-100-self-improvement-e1](#) / <https://github.com/nicholashui/genetic-swarm-ops/pull/1>

Commands (green)

```
# Root
npm test
npm run business:validate
npm run business:eval

# Backend
cd backend
set PYTHONPATH=.
python -m unittest discover -s app/tests/unit -p "test_*.py" -v
python -m unittest discover -s app/tests/e2e -p "test_*.py" -v

# Frontend
cd frontend
pnpm lint
pnpm typecheck
pnpm test
```

Seed login

- [admin@example.com](#) / [admin-password](#)

Remaining non-goals / later

- Full LightRAG vendor / Neo4j production mesh
- Live external CRM/email adapters
- DGM-style host code self-rewrite
- Full Playwright UI CI with always-on servers
